

# Team Reflection Week 15

The work is going well for the group, we managed to create a working first prototype of what we're planning to create. The prototype displays a map of the world together with markers on the map indicating where wildfires (past and present) are located.

We have not encountered any serious issues in the team dynamics, we have good communication, except for Thursday where some miscommunication about a meeting occurred. However it's the first sprint and we are planning to improve.

We have taken measures to get the software to be able to run on everyone's computer and are in early processes of maintaining the code. We are currently using multiple APIs such as google maps and NASA and take great precaution when using our keys (deleting them when not using them) and not making unnecessary API calls.

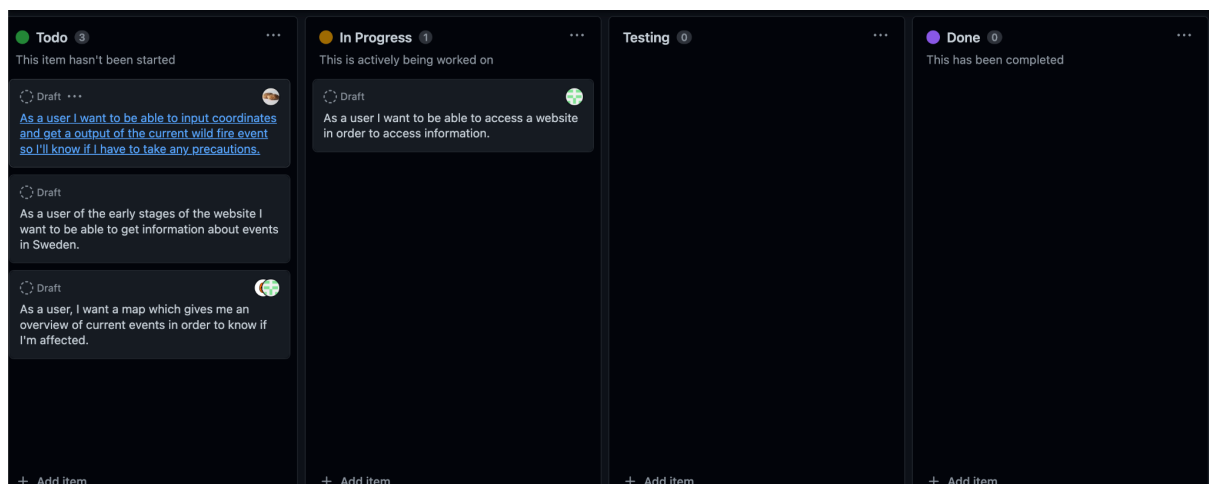

Now when things are up and running we plan to add additional functionality on the current base. These are things such as smaller windows when hovering over current map markers with more information about the fires.

The user stories which we implemented this week can be seen in the images below. As shown, we did not manage to finish all the user stories in the sprint, but this is because we changed some stories and added some extra.

To improve.

We should test more code and have a dialogue regarding documentation. Ask from another perspective how we are doing (ask questions regard contributing).

Start of the week:

End of the week:

●

Todo ①

...

This item hasn't been started

Draft

As a user I want to be able to click on the map where there's a fire and recieve additional information

+ Add item

●

In Progress ②

...

This is actively being worked on

Draft

As a user I want to be able to input coordinates and get a output of the current wild fire event so I'll know if I have to take any precautions.

Draft

As a user of the early stages of the website I want to be able to get information about wild fires in Sweden.

●

Done ②

...

This has been completed

Draft

As a user I want to be able to access a website in order to access information.

Draft

As a user, I want a map which gives me an overview of current wild fires in order to know if I'm affected.
