

Team reflection week 19

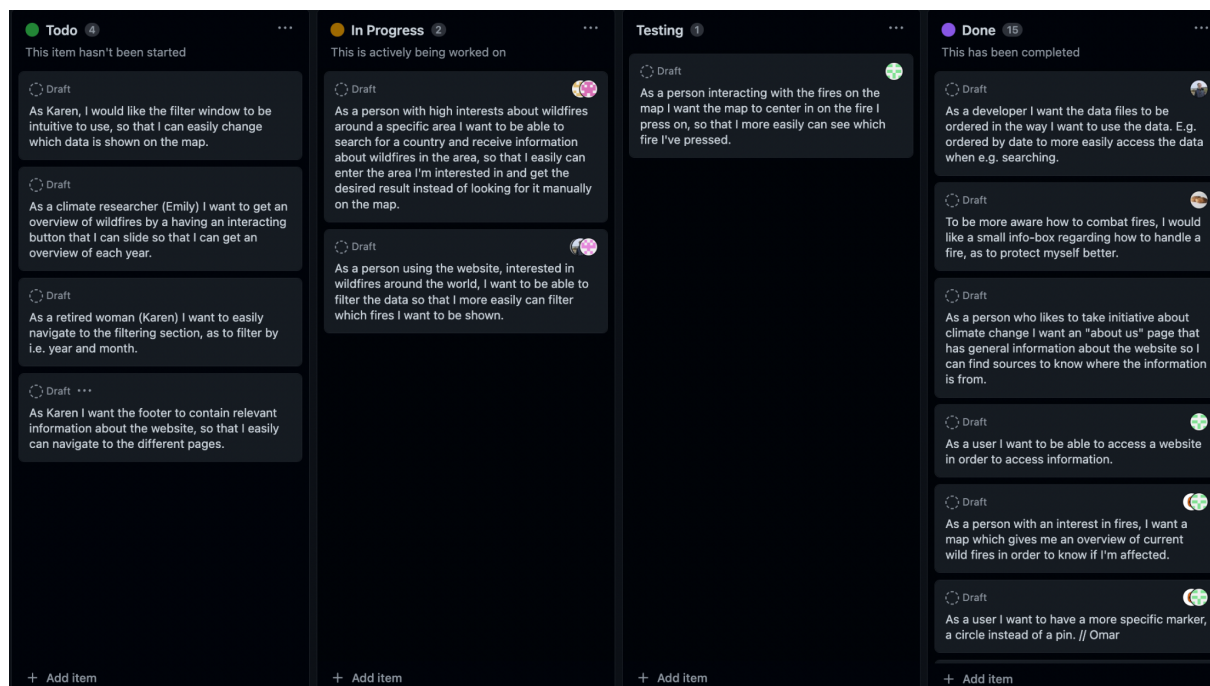

The team is still doing great. The teamwork is working a lot better than the first weeks, which is great. We can definitely still improve even more by e.g. pushing each other and working more together.

We ensure the code is good by keeping each other accountable through peer code reviews. On top of that we have continued and finished work from previous weeks. We are also planning a final team code review where we will look through the code base together.

All user stories seen in the first screenshot of the kanban board below were implemented except for the one about the footer, because our product owner said no.

Our plans for the upcoming sprint is to clean up our repository, make sure everything works as expected to be able to launch our product by the end of the sprint. We also plan to begin working on the video.

Start of the week 8/5

Middle of the week 10/5

This is actively being worked on

Draft

As Karen, I would like the filter window to be intuitive to use, so that I can easily change which data is shown on the map.

Draft

As Karen I want the footer to contain relevant information about the website, so that I easily can navigate to the different pages.

Draft

As a developer I want the filterwindow to keep its changes when it's closed so that the user gets a more intuitive user experience when using the filter.

Testing

Draft

As a person interacting with the fires on the map I want the map to center in on the fire I press on, so that I more easily can see which fire I've pressed.

Draft

As a person using the website, interested in wildfires around the world, I want to be able to filter the data so that I more easily can filter which fires I want to be shown.

Done

This has been completed

Draft

As a developer I want the data files to be ordered in the way I want to use the data. E.g. ordered by date to more easily access the data when e.g. searching.

Draft

To be more aware how to combat fires, I would like a small info-box regarding how to handle a fire, as to protect myself better.

Draft

As a person who likes to take initiative about climate change I want an "about us" page that has general information about the website so I can find sources to know where the information is from.

Draft

As a user I want to be able to access a website in order to access information.

Draft

As a person with an interest in fires, I want a map which gives me an overview of current wild fires in order to know if I'm affected.

Draft

As a user I want to have a more specific marker, a circle instead of a pin. // Omar

Some visual changes we did

The filtering for year and month changed from two sliders to two comboboxes to make the use of the filter window more intuitive:

The footer was removed due to a request from the product owner:

Below the button group in the top right of the screen the current filter applied is also shown.
